## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C.

121:

- I. Claims 1-20, drawn to a method of coloring an optical fiber, classified in class 430, subclass 201+.
- II. Claims 21-25, drawn to a tandem coloring system, classified in class 522, subclass 96+.
- III. Claims 26-27, drawn to a coloring die for coloring an optical fiber, classified in class 428, subclass 378+.
- IV. Claim 28, drawn to a colored optical fiber, classified in class 385, subclass 123.

2. The inventions are distinct, each from the other because of the following reasons:

+++ Inventions I, II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are Group I discloses a method for coloring an optical fiber; Group II discloses a tandem coloring system; while Group III discloses a coloring die for coloring an optical fiber. Each group has different function.

+++ Inventions I, II, III and IV are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the colored optical fiber as claimed can made by another process.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
